#### Modification notes

22.6.04	Contents have been completely updated		
---------	---------------------------------------	--	--

**i** Due to recent events, we would like to draw your attention to the following information concerning customer complaints about fabric and leather upholstery.

If, despite all efforts by the workshop, seat covers have to be replaced, these will continue to be inspected by the responsible warranty office.

Prior to replacing seat covers, it must therefore be ensured that the damage was not caused by the customer through soiling of the upholstery or due to normal wear and tear.

#### 1. Discoloration of covers

Possible cause: colored clothing  
Remedy: Clean covers with car care product (see Service Information: Polish and car care products for vehicle conditioning)

#### 2. Soiling of covers

Possible cause: Food stains or abrasion due to use of wrong care/cleaning product  
Remedy: Regular care and cleaning of covers with Mercedes-Benz car care product (e.g. leather care foam A 001 986 59 71 10, fabric upholstery cleaner A 001 986 25 71)

#### 2. Damage to covers

Possible cause: Clothing, sharp objects  
Remedy: Repair paint coat on leather covers (see AR - Repair paint coat of leather cover)

Replacement of leather covers due to waves and creases which reflect natural leather formation is not warranty-relevant and **may be rebilled** following warranty inspection.

Please remember that leather upholstery is a natural product that undergoes natural aging and that certain environmental influences (e.g. high humidity, high temperatures) may cause the leather to react in different ways (heavy creasing).
